

WHAT MULTI-GARD[®] IS...

- Multi-Gard is a multiple celled conduit that has been designed for fiber optics and other small diameter cables.
- Raceway system designed specifically for the maximum protection of your cable installation.
- Industry standard outer duct in plastic, fiberglass or steel for protection and rigidity.
- Pre-lubricated PVC innerducts for easy cable placement.
- Engineered plastic innerducts in all bends resists “rope cut-through” while pulling cable.
- Joins together without glue. Newly redesigned non-reversing gaskets hold high air pressure required for new cable jetting procedures.
- Complete line. Bends, manhole adapters, handhole adapters, etc. It’s all there.
- Provides for fast and easy cable pulls.
- Joins easy and won’t pull apart.

Where Multi-Gard[®] Is Used

- Wherever the ground is being opened to lay a new communications cable or duct.
- The minimal additional cost to the project is nothing compared to the cost of a future rebuild.
- Those additional cells may be needed even sooner than you think.

Why Should You Use Multi-Gard?

- Increasing demand for underground cable pathways.
- Bandwidth gobbling technological inventions.
- Internet and other online multimedia.
- Increased difficulty in obtaining right of way.
- Maximize pathways while window of opportunity exists.

WHAT MULTI-GARD® IS...

- Lease unused cells to defray construction costs.
- Most efficient means of cable installation.
- Easiest Raceway system to install.
- Save installation time.
- Feel confident that your network is protected.
- Multi-Gard will save you money!
